

Rancho Ventura IWDD

Service Line Movement Request

To maintain records regarding the location of irrigation pipes within each property in the district, the Board of Trustees needs to review and approve the work to be completed by irrigation crews to ensure quality control. The district has also adopted standards for the materials used to ensure the system can be maintained such as valve caps and piping. While additional valves can be added to a property and the alley valve moved to a more desirable location, one valve must always be located along the alley and cannot be capped.

Please fill out the top half of this form and attach a quick dimensioned sketch indicating demolished and new valves/pipes. We will followup with you within 2-3 days. Thank you.

Name: _____ Date: _____

Street Address: _____ Phone Number: _____
